

Work Done and Responsibility

Adinan Azeez KT

- Studied the concepts of HLD, LLD, Client–Server Architecture, REST APIs, MVC Architecture, Database Design, and Software Modelling.
- Watched the shared learning videos to understand system architecture concepts.
- Analyzed similar projects such as Email Spam Detection and House Price Prediction.
- Understood the interaction between the Frontend, Backend, Database, ML Model, and APIs.
- Prepared a rough system architecture for the Synapse project.
- Attended the Phase 3 online and offline meetings for project guidance and planning.
- Shared System architecture knowledge among members

Abhishek TP

- Studied the machine learning concepts required for the Train Delay Prediction System.
- Explored similar machine learning projects to understand datasets, features, algorithms, and evaluation methods.
- Collected historical train delay data, weather data, and other relevant datasets from various sources for model development.
- Designed and finalized the system architecture for the Synapse project.
- Documented the Database Design Document (DDD), work done document and UI/UX Design Document.
- Attended the Phase 3 online and offline meetings for project guidance and planning.

Ihsana Ilyas

- Studied various machine learning algorithms suitable for train delay prediction, including Linear Regression, Decision Tree, Random Forest, XGBoost, Gradient Boosting, and LightGBM.
- Analyzed different approaches and selected the most appropriate algorithm(s) for the Synapse train delay prediction system.
- Documented the Software Architecture Document (SAD).
- Assisted in documenting the system architecture, including the architecture overview, layer descriptions, and component interactions.
- Collected the Train details for dataset preparation.
- Attended the Phase 3 online and offline meetings for project guidance and planning.

Albert Jossy

- Developed the frontend of the Synapse – AI-Powered Train Delay Prediction System using the selected web technologies.
- Designed and implemented the user interface for the Home Page, Prediction Page, and Prediction Results Page.
- Integrated frontend components to provide a smooth and user-friendly navigation flow.
- Assisted in designing the UI/UX Design Document, including screen layouts, navigation flow.
- Participated in team discussions and collaborated during the frontend development and UI/UX design process.
- Attended the Phase 3 online and offline meetings for project guidance and planning.
